Multimodal Imaging Platform
Optimized for the Anterior Segment
ANTERION®

HEIDELBERG ENGINEERING

ANTERION®

Optimized for the anterior segment

ANTERION® utilizes the power of high-resolution swept-source OCT images to provide the most important anterior segment examinations and measurements in one modular, upgradeable platform. The single workflow-efficient solution brings together corneal topography and tomography, anterior segment metrics, axial length measurement and IOL calculation to transform the day-to-day routine of busy practices and clinics.

Key benefits

- All measurements based on high-resolution swept-source OCT images
- Modular and upgradeable platform to suit different workflow needs
- Supports the complete ophthalmic image management solution, HEYEX 2

All measurements based on swept-source OCT

Visualization of the anterior segment

Large image depth

Small sensitivity roll-off

Visualization of lens and iris

Large dynamic range

High scatter

Low scatter

Visualization of lens material

High sensitivity

Low scatter

Visualization of chamber angle
Long wavelength

Low scatter in sclera

Comprehensive functionality in one device

Cornea App
- Cornea topography
- Cornea tomography
- Total corneal astigmatism
- Total corneal power
- Pachymetry

Imaging App
- Cornea
- Anterior chamber
- Visualization of anterior and posterior lens surface

Cataract App
- Axial length
- Cornea analysis
- Anterior chamber analysis
- Lens thickness
- IOL calculation

Metrics App
- Anterior chamber analysis
- Anterior chamber angle assessment
Workflow optimization

The challenge:
The use of multiple devices for each patient examination is time-consuming and puts strain on both operators and patients.
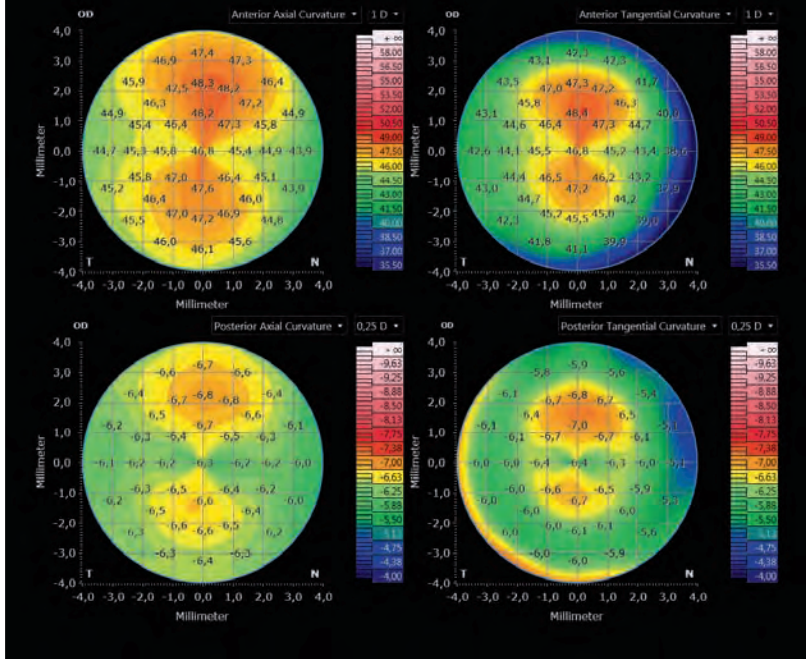

Biometry incl. axial length ▶ Cornea examination ▶ Anterior segment imaging ▶ Combine and analyze acquired data ▶ Patient consultation

Our solution:
ANTERION combines all these steps into one device. The examination takes just few seconds and can easily be delegated.

One imaging platform – **single device** – ▶ Patient consultation
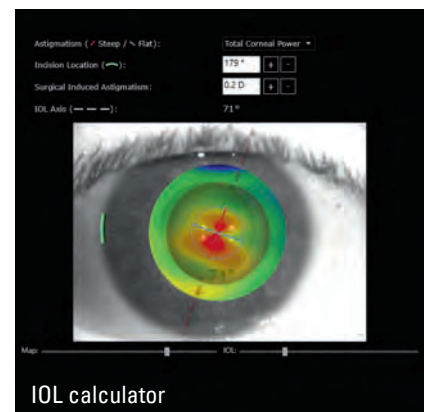

ANTERION®

Cornea App

Generate high-resolution images and detailed maps including: camera image, OCT image, anterior and posterior axial curvature maps, tangential maps, elevation maps, total corneal power map, corneal wavefront maps, and pachymetry map.

OCT + Camera image

Cataract App

Axial length

mm   20   22   24

Biometry including axial length

The data obtained in the cornea analysis combined with the anterior chamber depth and width, lens thickness and axial length determines the parameters for IOL calculations. View the camera image and OCT image to confirm your measurements.

IOL calculator

4

ANTERION®

Metrics App

Single view

Multi view

Measure anterior chamber depth, volume and angle, spur-to-spur, white-to-white and angle opening distances, trabecular iris space area (TISA) and lens thickness parameters all in one App.
## Imaging App

Iris pigment cyst

Visualize anterior segment pathologies and signs of surgical interventions, e.g. keratoplasty, LASIK, implanted IOLs and phakic lenses using the versatile anterior segment imaging application.
ANTERION®

Dense cataract

IOL, posterior capsule and vitreous

ICL and iridectomy

Intracorneal ring segments
