

SPECTRALIS®

Widefield Imaging Module

Widefield Imaging Module

SPECTRALIS®

The Widefield Imaging Module provides the standard field of view of a mydriatic fundus camera for all SPECTRALIS® fundus and OCT imaging modalities, simplifying diagnostic protocols and facilitating detection of peripheral pathology.

Widefield Imaging Module

SPECTRALIS®

IR

The Widefield Imaging Module provides the standard field of view of a mydriatic fundus camera for all SPECTRALIS® fundus and OCT imaging modalities, simplifying diagnostic protocols and facilitating detection of peripheral pathology.

The Widefield Imaging Module provides a 55-degree field of view for all SPECTRALIS® fundus imaging modalities including MultiColor, BluePeak, infrared reflectance, angiography, and OCT. Capturing the macula, the optic nerve head and areas beyond the vessel arcades in a single image, the Widefield Imaging Module facilitates comprehensive diagnostics. The high-resolution, high-contrast scanning laser images captured with this SPECTRALIS module offer diagnostic capabilities beyond those of conventional fundus photography.
